

Aerial Practical Assessment

Scenario #2 Handout

This is a timed scenario based on a gear deployment for single person aerial rescue event. Utilizing equipment from Squad 21, place the aerial ladder at ground level and deploy the basket stretcher to the ladder tip. The scenario will begin when fire fighters begin to don PPE for the scenario and will end when the scenario objective is met - the rescue basket stretcher is elevated 30' off the ground with gear to secure a patient and a guideline attached. The minimum PPE for the fire fighter manning the guideline is helmet and leather gloves. Good luck!

Proctors will be stationed at:

- 1 – Captain: The staging area for the scenario briefing.
- 2 – Engineer: At the aerial controls. DO NOT allow ladder motion while fire fighters are not secured or EXTEND/RETRACT while fire fighters are on the ladder.

You may ask for assistance from the proctors, but the time will not be stopped.

After the scenario has ended, please rehab as necessary. A timed breakdown for the event will be provided to the Captain as well as short debrief for crew questions if desired.

Any questions? Good luck!

Turnout at the Staging Area:	Start Time
Apparatus in Final Position:	
Aerial Pump Enabled:	
Aerial Stabilized:	
Rescue Stretcher Deployed:	
Ladder at 30' mark with Guide:
